PROFESSIONAL SUMMARY

Aspiring ML/AI Engineer and Full-Stack Developer with 3+ years of experience building scalable web applications and data-driven solutions using Python, Django, JavaScript, and PostgreSQL/MySQL. Proven ability to architect production-grade systems serving 50+ enterprise clients, optimize database performance by 40%, and automate workflows saving 14+ hours weekly. Strong foundation in Machine Learning, Exploratory Data Analysis (EDA), predictive modeling, and data visualization with hands-on Scikit-learn and Pandas experience. Passionate about leveraging AI/ML to solve complex business problems and deliver intelligent, high-impact products at scale.

TECHNICAL SKILLS

Languages: Python, JavaScript, SQL, C#, HTML5, CSS3, Bash

ML & Data Science: Machine Learning, Deep Learning, Neural Networks, Scikit-learn, TensorFlow, NumPy, Pandas, Matplotlib, Seaborn, Data Analysis, Exploratory Data Analysis (EDA), Data Cleaning, Feature Engineering, Data Visualization, Statistical Modeling, Power BI (Learning)

Frameworks & Libraries: Django, Django REST Framework, .NET, Bootstrap, jQuery

Databases: PostgreSQL, MySQL, SQLite, Database Design, Query Optimization, Joins, Window Functions, Aggregations, Indexing

Tools & Platforms: Git, GitHub, Jupyter Notebooks, Google Colab, VS Code, Gunicorn, WhiteNoise, Linux, Jira, Confluence

Web Technologies: REST APIs, Responsive Design, Accessibility (WCAG), SEO Optimization, SMTP Integration, AJAX

Methodologies: Agile, Scrum, Version Control, Code Review, Test-Driven Development (TDD), CI/CD

WORK EXPERIENCE

Concept QA Labs, Hyderabad, Telangana, India

August 2022 – Present

Software Developer

- Architected and built CQAL Client Management System, a full-stack Django application with MySQL backend serving 50+ active clients, reducing manual audit tracking effort by 60%
- Streamlined complex database queries using indexing, `select_related`, and `prefetch_related`, cutting average query execution time by 40% and page load times to under 2 seconds
- Engineered ISO Audit Document Generator to automate compliance report creation, reducing document preparation time from 4 hours to 30 minutes per audit cycle (87% improvement)
- Launched the Concept QA Labs corporate website with responsive design using HTML5, CSS3, Bootstrap, and Django, driving a 35% increase in organic traffic
- Established role-based access control (RBAC) system with secure authentication, ensuring data integrity and compliance across 3 user permission levels for 50+ daily active users
- Integrated email notifications and Excel report exports, accelerating compliance reporting workflows for 20+ scheduled audits monthly
- Analyzed client audit records using SQL (Joins, Window Functions, Aggregations) and Pandas, uncovering compliance gaps that improved audit pass rates by 25%
- Configured Jira-based project automation workflows, eliminating 50% of manual task assignment overhead across development sprints

Nvest Solution (Remote), Thane, Maharashtra, India

December 2021 – May 2022

Software Developer

- Developed and maintained frontend modules for enterprise insurance platforms including Bajaj Allianz, PNB MetLife, and SBI Life Insurance using C#, .NET, and JavaScript
- Resolved 30+ UI/UX defects and performance bottlenecks across 3 insurance portals, boosting page rendering speed by 25% and cross-browser compatibility
- Collaborated with cross-functional teams in an Agile/Scrum environment, contributing to daily standups, sprint planning, and code reviews across 4-week release cycles

- Enhanced responsive layouts and accessibility following WCAG guidelines, increasing mobile user engagement by 20%

PROJECTS

Customer Churn Analysis & Prediction | *Python, Pandas, Scikit-learn, Matplotlib, Seaborn, Jupyter*

- Conducted Exploratory Data Analysis (EDA) on 10,000+ customer records, performing data cleaning, feature engineering, and statistical analysis to identify key churn drivers
- Trained a predictive classification model using Scikit-learn (Logistic Regression, Random Forest) achieving 85% accuracy in forecasting customer churn probability
- Created data visualizations using Matplotlib and Seaborn to present business insights, enabling data-driven retention strategies that projected a 15% churn reduction

Full-Stack Developer Portfolio | *Python, Django 5, PostgreSQL, JavaScript, HTML5, CSS3, Gunicorn*

- Crafted a production-ready portfolio web application with 12 database models across 5 modular Django apps, featuring dynamic content management via Django Admin
- Designed a custom CSS design system (1,400+ lines) with light/dark theme toggle, glass-morphism UI, scroll-reveal animations, and responsive layouts from 375px to 1280px+
- Applied SEO optimization with Open Graph meta tags, semantic HTML, ARIA accessibility labels, and structured data for search engine visibility
- Configured deployment pipeline with Gunicorn WSGI server, WhiteNoise static file serving with compression, and environment-driven settings for SQLite/PostgreSQL switching

CQAL Client Management System | *Python, Django, MySQL, Bootstrap, JavaScript*

- Created a scalable client management platform for ISO audit tracking with scheduling, reminders, and task management for 50+ clients
- Executed advanced search and filtering with role-based access control (RBAC), reducing data retrieval time by 40% through query tuning and strategic indexing
- Integrated email notifications and Excel export for streamlined compliance reporting across 20+ monthly audits

ISO Audit Document Generator | *Python, Django, MySQL, Automation*

- Engineered an automated document generation system that cut audit preparation time by 87% (from 4 hours to 30 minutes per cycle)
- Delivered template-based report generation with dynamic data population from MySQL, ensuring 100% compliance accuracy across audit cycles

KEY ACHIEVEMENTS

- Reduced system latency by 40% through database query optimization, improving user experience for 50+ enterprise clients
- Saved 14+ hours per week by automating compliance document generation across the audit operations team
- Shipped 5+ production web applications serving real business users with zero critical downtime
- Pioneered the client management system from scratch, now the primary operational tool at Concept QA Labs

EDUCATION

Vidya Vikas Degree College, Akividu, Andhra Pradesh, India

July 2018 – October 2021

Bachelor of Science (B.Sc) in Mathematics & Computer Science — Grade: A

- Relevant Coursework: Data Structures, Algorithms, Database Management Systems, Object-Oriented Programming, Linear Algebra, Probability & Statistics

CERTIFICATIONS & CONTINUOUS LEARNING

- Machine Learning & Deep Learning: Actively pursuing advanced coursework in Neural Networks, Deep Learning, Natural Language Processing (NLP), and Computer Vision using Python, TensorFlow, and Scikit-learn
- Data Analytics: Expanding expertise in Power BI dashboarding, advanced SQL analytics, and statistical modeling for business intelligence
- Version Control & Documentation: Proficient in GitHub for collaborative development and Confluence for technical documentation
